

# Choropleth Map

**GOAL 5: ACHIEVE GENDER EQUALITY  
AND EMPOWER ALL WOMEN AND GIRLS.**

**SDG Target 5.5**  
Ensure women's full and effective participation and equal opportunities  
for leadership at all levels of decision-making.

Website: I am uploading the website on brightspace as 'website.zip'. It only opens correctly when it has been unzipped.

## My map:

This choropleth map illustrates the proportion of seats held by women in national parliaments across countries using 2025 data. The countries are shaded in green because green is a positively connotated color and having more female members in parliament is positive. The lighter colors illustrate less parliamentary seats occupied by women and the darker shades of green correspond to countries with more parliamentary seats occupied by women. Furthermore, the countries with 50% or more female representation are outlined in bold and have legends showing their respective percentages because the purpose of my map is to highlight the most equal countries. (The legends were originally made so that the country names were in the ocean but when I did Project > New Print Layout they overlapped with the continents.) The four countries that are highlighted are Mexico, Cuba, Nicaragua, Rwanda and the United Arab Emirates. Finally, countries with no data are in grey. The SDG goal and target are written in red to create a high contrast and draw attention.

The United Nations SGD goal highlighted in this map is the "Goal 5: Achieve Gender Equality and Empower All Women and Girls" and the target is "Target 5.5: To ensure women's full and effective participation and equal opportunities for leadership at all levels of

decision-making.” Furthermore, the SGD Indicator is “SDG 5.5.1: The proportion of seats held by women in national parliaments and local governments.”

(this link is also present on the website)

#### *Choropleth maps:*

A choropleth map is a thematic map where geographic areas are shaded or coloured in proportion to the value of a statistical variable being represented. In this case, darker shades of green indicate higher proportions of women in parliament. The benefits of this type of map are that it communicates patterns and disparities at a quick glance. This works well for ratio and percentage data.

Some drawbacks of choropleth maps are that a single color represents an entire country which hides regional variability. In this map, an important limitation is that there is a lot of missing data creating gaps and making it difficult to draw conclusions from the map.

#### *New technical skills gained:*

The first technical skill I gained was how to create a map using QGIS. I had never done this before and it was very interesting to see how anyone can extract data from the UN and use this to make a map. It was also interesting to see how every choice made changes what the map accentuates and what story it tells. Another technical skill I gained was making a website. I had never done this and I had no idea how it worked but it was fascinating to see the product of my creations.
